Full Stack Developer. Work experience developing with Node, React, Redux, SQL among other industry technologies. Participated as technical leader on the creation of a gamer hardware selling website. I consider myself a creative and proactive person with problem solving skills who feels comfortable working in groups, having great communication ability and independent.

ACADEMIC BACKGROUND

• **Full Stack Web Developer** // Henry Bootcamp // theory and practice 700 hours course // 2022

• **Profesorado en Tecnologías en Industrias de Procesos** // Instituto Superior de Formación Docente y Técnica SUETRA // 2015 ~ 2019
Processing Industries Technology Teaching degree

DEVELOPMENT EXPERIENCE

• **Countries webapp (Individual project at Henry)**

Client app made using React / Redux and backend app made using Node / Express / PostgreSQL. Beyond counting with its own database it also integrates an external API which is used to load data on first use.

https://github.com/bgalacho/Pi-Countries

• **Hardware selling website (Final project at Henry)**

Developed with React / Redux for the frontend and Node / Express / PostgreSQL for the backend.

Hardware selling site with filtering for category, price, name and others. With a user system that allows the app to differentiate between normal and admin user types, admin panel for content management, email and Google authentication, email notifications and MercadoPago payment gateway.
